

Good morning everybody! Today, I want to talk about the changes of China.

Speaking of the changes, the first one must be the economy. As we know, buildings are taller and taller in China and people have more disposable income. So we can buy our own car as a convenience and travel all over the world.

The second one is education. Children can accept education easier than before even they are in poverty. And graduate student are doubled than 10 years ago.

Thirdly, the political environment is changed. China is working collaboration with many foreign countries and our high speed rail ways connect to southeast Asia.

As the economy developing, environment problem is prominent. Due to the factories generate waste water and emit toxic gas, our sky is not blue and our water is not clear. Food security is also a striking problem. What should we do?

Fortunately, there are many diligent scientists in China. They design some devices and innovations to help us solve this problem. Our technology is not backward as before. "Made of China" is becoming "Created of China."

As I said, these changes are crucial for everyone. Let my partners show the detailed descriptions for you.

Head:Changes of China

1. Economy: Speak of, Convenience

2. Education:

3. Polity: Collaboration

4. Environment: Prominent, Generate, Emit, Striking

5. Technology:Diligent, Device, Innovation

Tail: Crucial
